Installing Mac Drivers:

1. Steps to install driver

- Do not attach USB_Mini device during the driver installation.

- On your Mac computer with macos Mojave unzip the package by right click & unzip package
 - Double click on the LAN78xx 1.0.4.pkg to start the installation.
 - Click continue and agree to the licence agreement and continue.
 - On prompt provide your administrator account password.
 - Wait for the installation to finish. This may take a few minutes.
 - You will see the Installation was successful message once the installation is completed. Click Close to exit.
 - The driver should be installed to the /Library/Extensions folder as LAN7800.kext on successful installation.

2. Loading the driver

- The driver gets loaded automatically on attaching USB_Mini device.
